How the IPAC lapse was identified

On December 6, 2024, Ottawa Public Health became aware of a possible Infection Prevention and Control (IPAC) lapse as a result of observations made during a site visit to your premise.

Summary Description of the IPAC Lapse

- Cleaning and disinfection of reusable equipment/tools was inadequate, used and clean equipment was not appropriately separated, and used equipment have been reused without adequate cleaning and disinfection in between.
- Cleaning and disinfection of reusable equipment/tools was not conducted in accordance with the Infection Prevention and Control requirements set out in Ontario Regulation 136/18 and the best practice standards as per Personal Service Settings “Public Health Ontario: Guide to Infection Prevention and Control in Personal Service Settings, 3rd Edition, July 2019”.

IPAC Lapse Investigation

Did the IPAC lapse involve a member of a regulatory college?

No

If yes, was the issue referred to the regulatory college?

N/A

Were any corrective measures recommended and/or implemented?

The personal service setting is to ensure that:

- Used equipment is cleaned and disinfected after each use.
- Ensure staff are knowledgeable and practicing consistent procedures for cleaning and disinfection of reusable equipment.

Please provide further details

- Corrective measures were implemented, and education provided 2024/12/06.
- Re-inspection will be completed to ensure ongoing compliance of the Ontario Regulation 136/18 Personal Service Settings and the best practice standards as per Personal Service Settings “Public Health Ontario: Guide to Infection Prevention and Control in Personal Service Settings, 3rd Edition, July 2019”.

Date any order(s) or directive(s) were issued to the owners/operators (if applicable)

Date of Final Report Update(s)

N/A

Date all corrective measures were confirmed to have been completed

Reinspection conducted on 2025-01-06 and all corrective measures were confirmed to have been completed.

Brief description of corrective measures taken

- Used equipment is cleaned and disinfected after each use.
- Staff demonstrated appropriate cleaning and disinfection practices.
- Disinfectants meet appropriate concentrations.
- Single use items are discarded after use.

Final Report Comments and Contact Information

Any Additional Comments

Public service announcement was issued on Tuesday January 28 by Ottawa Public Health (OPH) alerting the public about potential exposure to blood-borne infections for individuals who received a manual facial with use of a comedone extractor with lancet (used to remove blackheads and treat clogged pores).
